

Altaf Saadi, MD, MSc is a general academic neurologist at Massachusetts General Hospital and instructor of neurology at Harvard Medical School. She is also associate director of the MGH Asylum Clinic and faculty affiliate with the Mongan Institute. Her research focuses on neuropsychiatric health disparities, racial/ethnic minorities and immigrants, and addressing inequities through community-partnered and policy-relevant scholarship and action.

Dr. Saadi completed her neurology training at the Harvard Partners MGH-BWH Neurology Program, where she also served as Chief Resident. Her research training includes a fellowship with the National Clinician Scholars Program at UCLA, where she conducted several health services research projects and received a master's degree in health policy and management at the UCLA Fielding School of Public Health. One of her projects focused on understanding how health care facilities can ensure that all patients feel safe when accessing health care, regardless of their immigration status, exploring the concept of "sanctuary" and "safe spaces" in the healthcare setting.

As an asylum evaluator for the MGH Asylum Clinic and Physicians for Human Rights Asylum Network, Dr. Saadi has conducted evaluations for asylum-seekers in the community and in immigration detention centers. She has also assessed the medical conditions of confinement in immigration detention at facilities in California and Texas, including with Human Rights First and Disability Rights California. Dr. Saadi completed her undergraduate studies at Yale College and earned her medical degree from Harvard Medical School, where she graduated *cum laude* and received the Dean's Community Service Award.
