

Developing our Data-Driven Point of View on Sexual & Reproductive Health Care Disparities ^

Within a Federated Model

Planned Parenthood Federation of America (PPFA) consists of a National Office and 56 locally governed affiliates that operate more than 600 health centers across the country.

Goal:

Develop a framework to help PPFA address health disparities for our patient population as a component of improving health equity.

Strategy:

Engage in a partnership with a Planned Parenthood affiliate focused on reducing specific health disparities in their patient population.

Through this partnership, the PPFA Disparities Leadership Program team will focus on:

1

Drafting achievable outcomes based on quantitative and qualitative research.

2

Working with the affiliate to identify community efforts to address stated outcomes.

3

Working to understand the underlying drivers of disparities in select communities.

By engaging in this work we hope to lay the foundation to support other affiliates' efforts to better understand, assess, and develop plans to drive meaningful change around health equity.
